

Adam Kisiel
Warsaw University of Technology, Poland

My name is Adam Kisiel.

I am a young scientist working in the Warsaw University of Technology, Poland. I have been a user of RHIC, as a member of the STAR Collaboration, since 1999. My PhD thesis, defended in 2004, was based on the research carried out at the RHIC complex. My main area of study is close-velocity two-particle correlations also known as femtoscopy or "HBT".

I have worked at RHIC as an undergraduate student, as a PhD student, and as a young researcher living on BNL campus. Therefore, I have experienced a lot of the practical aspects of life at the Lab. I am also a non-US user, and I travel to and from the lab quite often.

I hope that I can represent the two large communities of RHIC Users - the young researchers, which are in the process or just recently finished their PhD, as well as the foreign users. I think I can use my experience to improve their work and life at the RHIC complex.
